

She during all that time was silly and obviously deteriorated as far as judgment, and kept talking about how terrible her husband had treated her, but the facts were that she was guilty of a lot more misbehavior than the husband.

Q Did you release her sometime?

A She was sent home on the 23rd of January.

Q When did she return?

A Then Dr. B. O. Thomas called on the 15th of February - about a period of three or four weeks later - and said she had done precisely the same thing - had locked herself in the bathroom and was trying to kill herself and she was just covered with bowel movement, and they were completely unable to look after her.

Q Was she then returned?

A She's been in our hospital since the 15th of February.

Q And you see her how often?

A Every day.

Q Did you see her today?

A Yes.

Q What is the condition of her mentality?

A She is definitely unable to exercise normal judgment and reasoning power for a woman her age.

Q Is she non-compos-mentis, in your opinion?

A Yes, on the basis of I think, partly, hardening of the arteries, and like that - we just don't know - her brain has deteriorated.

Q How long do you think this condition will exist?

A I don't believe under modern methods it is curable in any way.

Q Is she getting progressively worse?

A To some degree. She is very silly. She apparently has no reason. I don't know. She will complain about this and that,
